AUTOMATIC WATCH WINDERS

WWW.RAPPORTLONDON.COM

A Heritage of Excellence

Rapport is a family run business with more than a century of expertise in the horological market. The company was founded in 1898 by Maurice A. Rapport who was an energetic young entrepreneur keen to make his mark on an age that thrived on innovation.

His skills lay in the manufacture of prestige timepieces and it did not take long for the name of Rapport to become a household name in clockmaking throughout the world.

Four generations later the business remains a private limited company and is proud to continue the philosophy laid down by the founder of innovation, quality and service. Investment in technology, craftsmanship and the quest to source the highest quality materials ensures Rapport's commitment to produce world class products.

Rapport was also a pioneer in the growing market of Automatic Watch Winders. Back in the 1980s our designers produced the blueprints for a range of revolutionary winders with advanced mechanics to keep automatic watches fully wound – and it was our craftsmen who made the cases come alive with the skill and expertise inherited from their clockmaking work.

Today the Rapport range of Watch Winders has gone from strength to strength, with more technologically advanced motor-drives and a wide range of styles and material combinations to choose from - it is a range our founding father would be proud to be part of, and we are sure there is a model that any lover of prestigious watches will be proud to own.

Why use a Rapport Watch Winder?

Identifying that collectors may own several automatic timepieces, Rapport sought to create an elegant solution to ensure timepieces did not require to be rewound or reset when not being worn.

- *If left unwound, internal lubricants can be lost from critical areas of the mechanism leading to excessive wear on components and subsequent lack of accuracy.*
- *If recalibrating, may have further “complications” due to date/ time/ lunar phase etc. so this is best avoided*

Rapport Watch winders will care for your automatic timepieces and ensure they are “well exercised”.

Whether you have a single timepiece or larger collection, Rapport's Watch Winders are available in a range of finishes and configurations, offering the ultimate luxury gift and keep-fit regime for automatic watches.

- *They are designed to mimic the action of a watch being worn.*
- *Hold watches at a precise angle while being rotated.*
- *Can be set to run at programmed intervals to ensure the watch is permanently wound.*

Automatic watches are precision instruments and, like all thoroughbreds, they actually benefit from exercise.

Designed with Form & Function in mind

Rapport have called upon all the all the crafts developed in the company in four generations of manufacturing luxury horological products. We have married together the skills of the cabinet maker, the clockmaker and the electronic engineer to create a product range that is a perfect compliment in any home and yet performs a vital function for your automatic watches. Attention to detail in the construction of the cases and the quality and choice of materials used ensures the end product meets the highest standards of the most discerning collector.

The Mechanism

Watches are held on a fully adjustable clip that has a leather covered soft pad and which slots into cups inset into the body of the winder. The cups are designed to always stop in the vertical position when stationary.

The winding motors are the highest quality and run virtually silent. They are powered using the DC adaptor provided to suit countries worldwide. Some models are able to take USB connection or have a battery backup.

Each winder can be independently controlled and the Controls offer various modes of operation such as direction of rotation and timing options suitable for all automatic watches on the market today. Some models offer more advanced options with touch LCD displays to indicate functions in operation or setting the number of rotations per day.

Guarantee

We are sure that you will be absolutely delighted with your Rapport watch winder and as with all Rapport luxury products we offer a full 24 month guarantee.

Rapport are continually improving their range and although photographs and descriptions are correct at the time of this catalogue going to press, we reserve the right to alter the specification of any model.

Perpetua III Walnut

These watch winders with their classic Rapport design follow a successful tradition as this model finds itself in its third generation design. Its lasting appeal is in its simplicity of use and beautifully hand crafted cases means that it is the perfect compliment for any home and yet performs a vital function for your automatic watches. A modern twist give these models an LCD touch screen display enabling the user to take total control of each aspect of the winding function.

The Walnut model illustrated here, are all wood construction, with veneer that has eight layers of hand applied lacquer to give a luxurious high gloss finish.

Gold plated fittings (hinges, feet, gold panel) are gold plated and the interior are lined with a soft suede lining giving these watch winders a luxurious feel. The LCD touch screen display is nicely concealed above the watches for ease of viewing and access.
